## Gas-Fired Oven PGI30

### FLUE CONNECTION

All ovens are provided with an exhaust flue collar  $\frac{1}{2}$ " or  $2\frac{1}{2}$ " in height and 8" or 10" nominal diameter depending on model. The flue collar (ØH) is located on oven top to provide a secure connection to the chimney. The oven flue collar is designed to be connected to chimney listed to UL-103HT. When working on gas only ovens, the oven is suitable for connection to Type B Gas Vent when used with the draft hood. When burning wood, an independent Flue evacuation system is required.

### ELECTRICAL CONNECTION

Verify the power supply has the same rating as the oven.

### AIR SUPPLY

These ovens require make-up air to replace combustion air and excess air taken out by the flue. Always check for adequate openings to allow required make-up air flow in. Check table included in operations manual.
